One-Step Solution

Odorant Equipment Decommissioning

Committed to Excellence

Midland Resource Recovery ensures the safe and incident-free transport of mercaptan waste by eliminating the possible risk of release of odor during transport, receiving and storage. This is accomplished by enforcing a strict set of protocols to all transporters shipping material.

We use leak proof/airtight transport containers; both top and rear-loading (each container measures 24' x 8' x 8'); completely eliminating the possibility of odor leaks during transport; e-tracking located throughout the interior of each container allows complete securing of all materials placed within.

Process

At our processing sites in West Virginia and Texas, MRR utilizes thermo-chemical process to provide complete and final destruction.

We are entirely compliant with all regulations/certifications, backed by \$ 5,000,000.00 environmental, general and comprehensive insurance.
